

**Environmentally Friendly Solutions For Industry**

## **A local action for a sustainable development**

In a collective desire to enroll in an eco citizen approach, the company Mexel, its trade representative, the company Ceccaldi and the distribution company Bonifacio, have created a partnership to make available a cleaner fuel and optimize consumption. The interest for distribution companies is to offer to their customers a more efficient product that improves engine performance.

The marine professionals, who are environmentally conscious, and who use that fuel, receive in exchange samples and tests on the engines. These tests measure the combustion of 5 different gases: O<sub>2</sub>, CO<sub>2</sub>, CO, HC, NO<sub>x</sub>. After measuring the pollutant concentrations and diagnosis, the expert can indicate abnormalities that cause excessive fuel consumption. This operation can therefore reduce emissions in non-environmentally friendly gas, improve fuel management and reduce costs for final clients.
